

Anexo a la solicitud de depósito de la línea celular

Annexes to the deposited cell line

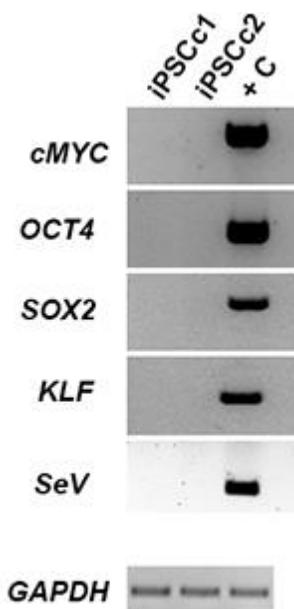

Ctrl1-FiPS4F1

Expresión de marcadores de pluripotencia. Expression of pluripotency markers.

A. *In vivo* staining (TRA-1-81) B. Ensayo alcalina fosfatasa. B. Alkaline phosphatase assay. Immunocytochemistry of pluripotency markers (C: SSEA-4 D: NANOG E: OCT-4 F: SOX2). Nuclei are stained with DAPI. Scale bar 200 μ m.

Detección de los transgenes (Klf4, Oct- 4 Sox2, c-Myc) en células reprogramadas mediante virus Sendai. Detection of reprogramming transgenes in cells reprogrammed using Sendai virus.

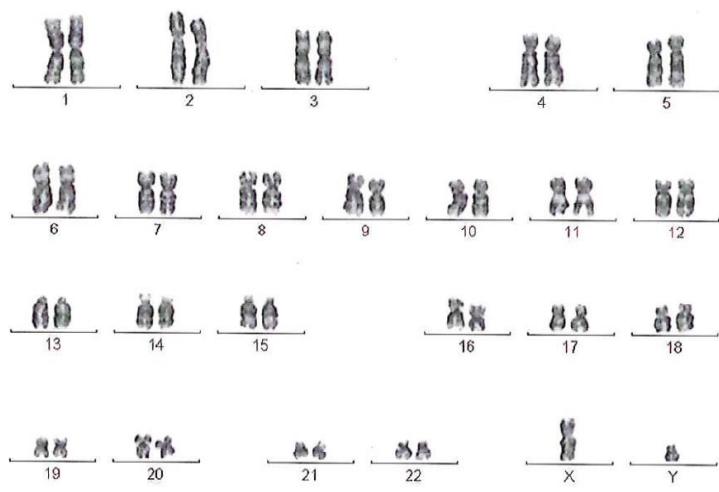

Expresión de los transgenes del virus SeV en dos líneas de células iPS (RT-PCR) . Las líneas c1 y c2 se analizaron en pasos 9 y 10. Los fibroblastos recogidos el día 7 tras la trasducción representan el control positivo.

Expression of viral transgenes in derived iPSC lines by RT-PCR. Two iPSC cell lines, c1 and c2, from the same patient are analyzed at passages 9 -10. The fibroblasts at day 7 after viral transduction are taken as positive control. The conditions for RT-PCR reaction are described by the manufacturer.

Cariotipo de la línea celular **Ctrl1-FiPS4F1** fase 12. **Ctrl1-FiPS4F1** cell line karyotype.

RESULTADOS ANÁLISIS CITOGENÉTICO

Cariotipo: 46,XY

Diagnóstico citogenético: Cariotipo masculino normal

Identificación celular mediante la huella genética por análisis de microsatelites STR de la
línea celular / Cell identity: genetic fingerprinting by microsatellite /STR analyses of the

Test de *Mycoplasma/Mycoplasma* detection

Mycoplasma enzymes activity test.

Result: negative.

Ensayo formación teratoma: análisis histológico (tinción Hematoxilina Eosina) / Teratoma formation assay: histological analysis (HE staining)

Ectodermo: retina (R), neuroepitelio (NE). Endodermo: Epitelio de intestino (GE). Mesodermo: Musculo (M), Cartílago (C). Escala 200μm.
Ectoderm: retina (R), neuroepitelium (NE). Endoderm: Gut epithelium (GE). Mesoderm: Muscle (M), Cartilage (C). Scale bar 200 μm.
